

## Share Fuel

- Transfer Fuel To Any Bike
- No More Siphoning

## Drain Your Tank

- For Maintenance Or Seasonal Storage
- No More Messy Cleanups

## Why Buy A Fuel-Tool?

- To put Freedom & Peace of mind back into the RIDE
- To be prepared for those times when you or your Buddy may run low or out of fuel while on a ride.
- It's a quick, safe and easy way to transfer fuel from one bike to another without the need of siphoning, carrying or searching for fuel.
- It also provides for a quick, safe and easy way to drain your tank for maintenance or seasonal storage.

## How Does It Work?

When you are powering your bike down the road, the engine is using all of the fuel pressure the fuel pump (that is in the tank) is sending to it BUT when your bike is idling, the engine is only using a fraction of the fuel and the remaining fuel pressure is looking for a home. Fuel-Tool, once connected, takes the pressure and gives it a home by transferring the fuel to another bike.

**Easy to store**
