

V-Twin Mfg.
LOAD EQUALIZER
VT No. 32-2014

This is a custom application and rider safety depends on proper installation. This product should only be installed by a knowledgeable and trained motorcycle technician. V-Twin Mfg. accepts no responsibility for improper installation.

This easy to install solid-state equalizer is designed to eliminate the common turn signal problem associated with L.E.D. Light modification.

NOTE: On late model Harley Davidson equipped with factory security system, the security light will stay illuminated. The security system is still fully functional and will not be damaged.

Installation Instructions:

1. Select a suitable location to mount the equalizer. The location should be away from extreme heat.
2. Splice the connections as shown. Brown to the RIGHT turn signal, Purple to the LEFT signal and Black to GROUND.
3. If adding this equalizer to a motorcycle with an existing light control module, splice the equalizer to the power supply side of the module.

NOTE: The equalizer will generate heat when used. Avoid extended use of turn signal or hazard warning flasher.
