The Construction

V-Twin™ Replica Frames feature steel forgings in neck, front and rear motor mounts, rear axle plates, swing arm and shock mounts. In this process, the steel is first fired as red hot ingot, next huge hammers compact and orient the grain structure into a rough shape of the part, subsequent hits form the part into its final shape, after which it is machined and heat treated which results in increased strength and resistance to wear. The related components used in construction are accurately formed stampings and drawn over mandrel seamless tubing which is tig welded together during final assembly.

Rolling Chassis Kits

V-Twin Mfg. *Rigid Replica Rolling Chassis* include Replica Fork™, Replica Frame™ and related components as appropriated for model years listed. Available in chrome or restoration (resto) finish. Available in hand or foot shift style tanks.
