

VT NO. 16-0821

FITS 1936-UP BIG TWIN

This tool will easily remove and install the left hand threaded nut that holds the trans sprocket on. The pilot is designed to be threaded onto the left-hand thread of the main shaft with the pilot in place. This will stop the tool from slipping when torquing 100 to 120 ft lbs. Apply lube to threads of tool.

This wrench is also used to drive nut #1026-B, for tool 16-0140 and 16-0149 , to install Timken® Bearing on sprocket shafts.
