

VT No. 18-0227

Big Twin 1990-97 and XLS 1991+
Buell and XL 2005+

DURABILITY AND PERFORMANCE BENEFITS

This kit will correct, prevent, and reduce overheating of the Clutch Pack. There is also an increased friction area for more grab and durability. This kit uses our CARBONITE® material and is our strongest clutch in this application.

INSTALLATION INSTRUCTIONS

The friction material should face the back of the drum. Start with an externally splined friction plate with the lining facing down and the steel side facing up followed by an internally splined friction plate with the lining facing down and the steel side up. Continue this process making sure each time a plate is installed that you only see the steel side. The last plate to be installed will be the double-sided friction plate. Reinstall the pressure plate and spring. Finish by adding lubricant.

Once installation is finished ride the motorcycle two or three times to make your final adjustments. If the Stack Up extends above the basket, remove internally splined plate and one externally splined plate.
