

Big Twin 1998-up

DURABILITY AND PERFORMANCE BENEFITS

This kit will correct, prevent, and reduce overheating of the Clutch Pack. There is also an increased friction area for more grab and durability. This kit uses our CARBONITE® material and is our strongest clutch in this application.

INSTALLATION INSTRUCTIONS

The stack-up for this kit is identical to the OE except you will add an extra friction and steel plate. Start by installing the narrow cross section friction plate into the basket (jutter plate). Next install the dish spring with the outside diameter facing up, alternate the installation of the remaining steel and friction plates ending with a friction plate. The last friction plate should be even with the top of the basket. Re-install the pressure plate, spring, and spring plate. Finish by adding lubricant.

Once installation is finished ride the motorcycle two or three times to make your final adjustments.

IMPORTANT!!

Always presoak the friction plates in the fluid they will operate in.
