What is included in this kit?

- Plug-n-Play Power Wiring Harness

Recommended tools:

- Universal Crimp Tool Cable ties

Installation instructions:

1. Be sure the ignition switch is in the off position.

NOTE: Every harness is intended to be a direct plug-in to the factory mating connector for easy installation. The connections can be found under the seat or either side cover depending on part number. For exact placement, check the factory service manual for more detailed information.

2. **32-6578 and 32-5062** are direct-connect female 12-volt power sources intended to provide switched power for whatever accessory that is connected to it. Dust cap to be installed when not in use.
3. **32-5058 and 32-5059** are 100% plug-n-play wire harnesses that is intended to be a direct connect and provide (2) additional sources of power. Perfect when power is needed on multiple accessories at the same time.
4. **32-5057** is a direct-connect harness that provides switched and constant 12-volt power while still preserving the original connection for additional accessories. Simply add whatever powered accessory needed using the heat-shrinkable butt splices that are already installed onto the harness.
5. **32-5060** is a direct-connect harness that provides 12-volt power while still preserving the original connection for additional accessories. Simply connects into the OEM accessory connector for easy installation.
6. **32-5066** is a direct-connect harness that provides constant and switched 12-volt power while still preserving the original connection for additional accessories. Simply connects into the OEM accessory connector for easy installation.
