

**V-Twin Mfg.**  
**Dyna Ignition Electric Tachometer Adapter Kit**  
**VT Part No. 32-7799**

This is a custom application and rider safety depends on proper installation. This product should only be installed by a knowledgeable and trained motorcycle technician. V-Twin Mfg. accepts no responsibility for improper installation.

The Tachometer Adapter must be used whenever single fire electronic ignition is installed on a HD motorcycle with an electronic tachometer.

Because the single fire ignition eliminates the wasted spark, the high voltage pulses at the single fire ignition outputs must be combined and sent to the tachometer through high voltage rectifiers.

The 32-7799 **TACH ADAPTER** allows for correct operation of the tachometer when the ignition system has been converted to single fire operation.

**Installation Instructions:**

1. Connect the black wire with the white stripe to ground.
2. Connect one black wire to each coil minus terminal, the same terminal the wires from the ignition are connected to.
3. Connect the white wire to the tachometer.

**Note:** The 32-7799 Tach Adapter cannot be used with the a rev limiter.
